Test - Visualization by Engineer Alfred Spandl

Memorize as many of the 25 word pairs as possible in 7 minutes. The rows go together, so 1st row: time clock and piglet, 2nd row: safe lock and amplifier, etc., down to the last row: cage and songbook. Set a timer and see how many word pairs you can remember. For simplicity, it's still English-English. Later it will be English-German. After 7 minutes, fold back the gray column or cover it, and fill in the empty fields with as many as you still remember.
